In order to open the web page, mouse is required. Do you just want to have a look at a website or your mobile device? WallpaperWebPage allows you to set any web page as wallpaper of your desktop: - Run the desktop icon to load the site - Open the context menu and select any link - Set wallpaper as icon in system tray - Define the size of the icon in the system tray - Set the appropriate desktop wallpaper - Explorer-like navigation in the web page WallpaperWebPage allows you to set any web page as wallpaper of your desktop. From any web page, your choice as wallpaper is as good as your list of favorite websites. The program has a good response time, even when a lot of sites are opened and navigated. Due to the way it assigns the desktop wallpaper, all previous wallpaper is removed. In order to save your desktop space, simply remove the WallpaperWebPage icon from your desktop. The minimized window is automatically closed. Note: Navigation of the links is supported. WallpaperWebPage Description: - Supports any web page as wallpaper - Assign, change and delete wallpaper at will - Set wallpaper as icon in system tray - Configurable in order to fit your needs - Lightweight program with barely used resources - Can be easily used by users with little or no experience in software programs - Easily removable from the system tray - Can be executed at the system startup - Customizable interface - Easy to configure - Does not interfere with the computer's running - Can be configured to run automatically at system startup - Support for all Windows operating systems - Supports all Windows browsers - Does not use additional RAM

What's New in the?

WallpaperWebPage features a user-friendly interface with a clear and simple menu layout. All the major settings can be made through the context menu. WallpaperWebPage greatly simplifies the creation and use of web wallpapers. It creates a network icon, on which the user can easily access the webpage to be set as a desktop wallpaper. Following key features: - Wallpapers can be created using a variety of web pages or image files. - Wallpapers can be set using URLs or by dragging-and-dropping them onto the desktop. - The web pages can be automatically set as the wallpaper or can be chosen from the Wallpapers list. - The layout of the Wallpapers list can be tweaked to avoid duplicates. - You can change the behavior of the WallpaperWebPage window according to your preferences. - You can enable the link-long-press feature. - Wallpapers can be pinned to the desktop. - You can set WallpaperWebPage to run at startup or not. - You can modify the Wallpaper list window in order to rearrange the list or to hide the Page Creation window. - The program requires Windows XP and Windows Vista. WallpaperWebPage Features: WallpaperWebPage is a free application that allows you to easily set any web page as your desktop wallpaper. Through a simple and intuitive interface, this program allows you to define and launch web pages as wallpaper or remove them from the list. It is also possible to create your own wallpaper. To do this, you need to drag-and-drop any image file on the desktop. Along with the default wallpaper, WallpaperWebPage creates a textbox on the desktop which you can use to write the URL of the page you want to set as wallpaper. This is a great feature for quick creation of web wallpapers. To change the settings for any wallpaper, you can edit the corresponding text box. To display the context menu, you simply need to right-click on the corresponding link. All of the major settings are displayed in the context menu. Among them, you can set the position of the program's icon, the wallpaper image, and if you wish,

the image size. It is also possible to specify the wallpaper's duration, show/hide the list of available web pages and to disable the autostart. In order to view the pages of the list, you simply need to double-click on one of them. To
